

AI & YOU

1. A starting point for human ingenuity

Think of AI as a partner in creation, but never as a substitute for your own thinking. Use it to enhance your creativity and productivity, while keeping control over your own ideas.

2. Don't infringe on others' rights

Be mindful of using AI in ways that could violate others' rights to their own likeness. Avoid being tempted to create deepfakes or other harmful content.

3. Protect yourself from abuses

With the advent of AI, we must guard against abuses of AI technology. Be vigilant and learn the signs of malicious practices. You have rights and have the ability to speak up if you see others using AI unethically.
